

Our commitment is to innovation and offering the most advanced dental health solutions that put digital technology at the service of wellbeing.

Cutting-edge with a human touch.

Corus Product

Instant

In an instant,
everything's the same.

INSTANTDIPEN_REV01_240220

EFFICIENT & PREDICTIBLE

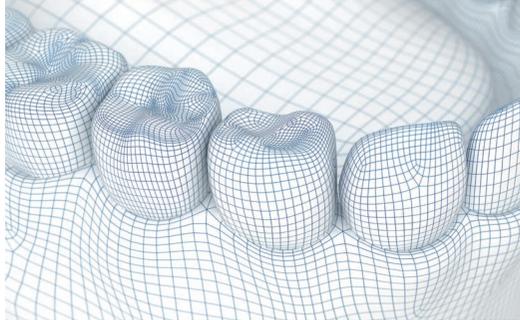

The Instant protocol involves digitally planning individual cases that, once validated, ensure maximum predictability and efficiency in the placement of immediate provisionals.

PATENTED & HIGH QUALITY

The system has been patented with the Corus guarantee and all the composite elements have been made under strict quality controls.

BIOLOGICAL

The bibliography proves the benefits of using transmucosal abutments in implantological restorations. A further advantage is making the peri-implant tissue stable from the first moment of the operation.

* instant®

INSTANT IMPLANTS

Instant is the exclusive instant loading of implants that lets you smile from the first moment. No need to worry about looking different because, on the same day as the implants are placed, you'll leave the clinic with your digitally created provisional teeth.

HOW IT WORKS

Simple past, perfect future

The Instant protocol allows us to plan and create your provisionals, evaluate how you adapt to them and therefore guarantee perfect final teeth.

MORE INFORMATION

Consult your dentist.

ONLY ADVANTAGES

Your Instant provisional teeth are as beautiful and comfortable as the final ones. Your smile is the same as always and you can continue your life as normal.

Your best look

No visible metal caps or unattractive empty spaces. With your provisional teeth, you won't have to hide your smile because it's the same as always.

More comfort

The entire treatment is quicker and more agile than conventional methods of immediate implants. What's more, the placement of the provisional teeth is more comfortable and virtually hassle-free.

In a single visit

Leave the appointment with implants and teeth simultaneously. You won't have to come back in to get the provisionals fitted and you won't spend a single minute with your mouth looking anything less than perfect.

More natural

By connecting the abutment and the provisional tooth immediately after placing the implant, the gums integrate them more naturally, promoting the longevity of both the implant and your smile.

You'll forget you're wearing them

Teeth that are custom-made for you. They fit perfectly into your gums, meaning you won't notice them and nor will anyone else.

All the Instant components are made under strict ISO 9001, 13845 and CE quality controls and protected by national and European patents.
