MONOLITHIC ZIRCONIUM
Illum is the permanent monolithic zirconium solution produced in a 100% digital workflow on natural teeth or implants, for both unitary cases and major restorations.

DIGITAL AND PREDICTABLE
The Illum digital protocol offers high predictability and precision. It makes it possible to customise each design and ensure excellent aesthetic and functional results. That means fewer (and faster) visits than for conventional prostheses.

BIOCOMPATIBILITY AND RESISTANCE
Illum prostheses are shaped ready for placement and have no ceramic coating. That means they offer high stability without cracking and excellent resistance to bending.

PERMANENT MONOLITHIC ZIRCONIUM PROSTHESES

Illum are the prostheses digitally manufactured with monolithic zirconium that best adapt to your smile with entirely natural aesthetic results, both on your teeth and on your implants. As a result of their high biocompatibility, they protect your gums and teeth and keep them healthy. With Illum, you get a natural smile and a quiet life.

HOW IT WORKS

The digital technology behind Illum makes it possible to plan and manufacture your permanent prostheses with maximum precision to make sure they exactly match your smile. Zirconium is the safest and most reliable material to protect your gums.

MORE INFORMATION

AESTHETICS AND HEALTH IN HARMONY

Illum looks after your image and your well-being. As a result of the exceptional properties of zirconium, it offers you every guarantee where biocompatibility and resistance are concerned.

Your most natural smile

Zirconium gives your new teeth a natural appearance that's very similar to what your original teeth looked like. Illum prostheses are unique in their ability to mimic your teeth.

Always like new

Because monolithic zirconium is a highly resistant material, the biomechanical properties of Illum prostheses offer complete resistance to wear and they withstand chewing movements without changing shape.

Biocompatible by nature

The zirconium used to make Illum is highly biocompatible and hypoallergenic: your gums naturally adapt to it and the chances of allergic reactions are reduced to a minimum. It protects your gum health better than any other restorative material.

No extra visits

As a 100% digital treatment, it's more efficient in every way. This means you'll make fewer visits to your dentist because they won't need to do all the tests needed for conventional metal-ceramic prostheses. With Illum, everything is fast, agile and precise.

Illum is a custom-made medical device manufactured in accordance with the requirements of European Directive 93/42/EEC in health centres authorised by the competent authorities.
